EDUCATION

Georgia Institute of Technology - Stamps President's Scholar

May 2027

B.S/M.S. Computer Science (Intelligence and Modeling/Simulation), Minor in Economics

GPA: 4.0

EXPERIENCE

Digital Technology Intern

May 2025 – August 2025

SLB

Houston, TX

- Cut 2024 emissions forecasting error from 16% to 1% by building a hybrid LSTM model and implementing Bayesian inference to dynamically refine predictive coefficients.
- Engineered scalable time-series forecasting pipelines with downtime simulations, and uncertainty quantification.
- Integrated statistical modeling and deep learning to create a forecasting framework enabling hard-to-abate industries to evaluate emissions reduction initiatives and economic trade-offs .

Undergraduate Teaching Assistant

August 2024 – Present

Georgia Institute of Technology

Atlanta, GA

- Collaborate with 45+ TAs and Professors to grade assignments and exams for over 1600 students.
- Teach 30 students weekly on covered lecture topics and facilitate group discussion on problem sets.
- Answer questions during weekly office hours covering all aspects of linear algebra and integral calculus.

Undergraduate Research Assistant

Dec 2024 – Present

Georgia Institute of Technology

Atlanta, GA

- Trained and evaluated CNNs (ResNet-18, VGG-11) on cropped 64×64 inputs, achieving up to 97% F1-score and revealing higher false-negative rates for highly camouflaged species.
- Led data preprocessing and model experimentation to quantify bird camouflage by building a 120K-image dataset across 12 species, balancing camouflaged and non-camouflaged classes.
- Identified species-specific camouflage effects through false positive/negative analysis, linking model errors to biological camouflage strategies.

PROJECTS

Navigateability | *Python, Node.js, React, Firebase*

Sep. 2024 – August 2025

- Built a full-stack web application to aggregate crowdsourced reports and campus data into accessible route maps.
- Recognized for innovation with 2nd place at Georgia Tech's FAIR Tech Competition.

Fake News Detector | *Python, Keras, Natural Language Processing*

June 2022 – Oct 2022

- Developed Natural Language Processing model to detect fake news from with 96% accuracy.
- Engineered text features, trained a logistic regression classifier using Python and Keras.
- Authored a research paper analyzing model architecture, performance, and real-world implications.

Climate Innovations

Jan 2024 – May 2024

- Conducted data analysis on building energy consumption and carbon emissions.
- Developed a systematic approach to data collection and analysis, ensuring accurate measurement of energy use intensity (EUI and greenhouse gas emissions).

LEADERSHIP

Data Science at Georgia Tech | *Logistics Director*

May 2025 – Present

- Led logistics for Hacklytics, a 1,000+ participant technical data-based hackathon including catering and securing \$100K+ in sponsorships.
- Handled tax forms and financial compliance for sponsorships, ensuring accurate processing of funding for the last three years.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, C, C++, R, MATLAB, HTML/CSS, LaTeX

Frameworks: React, Ionic, Django, Node.js

Developer Tools: Git, MongoDB, Google Cloud, Firebase, Visual Studio, PyCharm, IntelliJ, Eclipse

Libraries: Pandas, TensorFlow, PyTorch
